

Iago Porto Montes

Vigo, Spain · +34 646 892 498 · iagoportomontes@gmail.com · [LinkedIn](#) · [GitHub](#)

Full-Stack & Systems Engineer with 3+ years of experience architecting asynchronous Python/FastAPI microservices, building developer tooling, and deploying AI-driven solutions. Specialist in end-to-end project ownership, developer productivity, and optimizing distributed architectures for technical users.

PROFESSIONAL EXPERIENCE

Technica Engineering

Software Engineer | Vigo, Spain — April 2025 — Present

- **Full-Stack Product Engineering:** Built an interactive management UI using TypeScript and React, integrating directly with backend services and reducing UI-to-API latency by 30%.
- **AI & Developer Tooling:** Created a custom Model Context Protocol (MCP) server, boosting technical-user adoption by 15% via automated workflow orchestration.
- **Workflow Engineering:** Designed a development harness that automated code-generation pipelines, cutting team setup time by 40%.
- **Architecture & Concurrency:** Designed a distributed Python orchestration platform, replacing a Jenkins monolith with decoupled Edge services for concurrent execution.
- **Performance & Data:** Refactored SQL persistence layers, achieving a 40% reduction in database execution latency across production services.
- **Low-Resource Deployment:** Re-engineered deployment pipelines using Nuitka-compiled Python binaries in Linux Debian packages, reducing deployment time by 70% for low-resource environments.
- **Quality & Testing:** Maintained >85% code coverage across the full application stack through TDD, Stryker mutation testing, and Stagehand AI E2E tests.

Imatia Innovation

Software Engineer | Vigo, Spain — May 2023 — March 2025 (Full-time role concurrently completed alongside final year of Telecommunications Engineering studies)

- **API Engineering:** Developed Java Spring Boot RESTful APIs integrating 7,000+ telecom devices to optimize real-time logistics routing algorithms.
- **Optimization:** Optimized PostgreSQL queries within legacy codebases, decreasing average response time by 20% across core enterprise applications.
- **Prototyping:** Engineered a C++ computer vision component for text recognition (OCR) to reduce reliance on third-party vendor dependencies.
- **Collaboration:** Resolved critical system bugs within an Agile Scrum environment, maintaining high availability for daily telecom operations.

EDUCATION

University of Vigo

Telecommunications Engineering (Specialization in Telematics)

Vigo, Spain — September 2020 — May 2024

TECHNICAL SKILLS

- **Languages:** Python (FastAPI), TypeScript, JavaScript, Java (Spring Boot), React, Astro, SQL.
- **Cloud & DevOps:** Docker, GitLab CI/CD, GitHub Actions, Jenkins, Nginx, AWS / Cloud Environments (Theoretical/Conceptual).
- **AI & Developer Tooling:** Model Context Protocol (MCP), AI-driven workflows, Custom Harness Engineering, Stagehand AI.
- **System Architecture:** Distributed Systems, Microservices, Domain-Driven Design (DDD), Hexagonal Architecture, RabbitMQ.
- **Testing & Observability:** Test-Driven Development (TDD), Stryker (Mutation), Stagehand AI (E2E), Prometheus, Grafana, Loki.
- **Databases:** PostgreSQL, SQLite, Relational Database Design, Query Optimization.
- **Languages:** Spanish (Native), Galician (Native), English (Fluent).
